

**EASY.** Access 24/7 from any internet-connected computer. Also available on CD.

**CONVENIENT.** Train on your own time at your own pace.

**INTERACTIVE.** 3-D simulations recreate real-world use.

**CONSISTENT.** Standardized curriculum gives all staff the same information.

**IN-HOUSE.** It's always there to train new staff or provide a refresher course.

**AVAILABLE NOW.** Online or via CD—start today. No waiting for an appointment.

**FREE.** Yes, free.

**The perfect training solution for your busy practice.**

**“Training this way clearly offers some unique advantages. Studies show that, while students retain 5% of what they hear in lectures and 20% from audiovisual presentations, retention rates from e-learning can easily reach 75 to 80%.”**

—Jacques Devaud, CEO, eTrinsic  
Developer of the E-Trainer Program

## You've invented a PT/INR monitor that's accurate AND convenient. What do you do next?

**Simple. You develop a training program that's also convenient AND FREE.**

E-Trainer, a web- or CD-based orientation and training program, is designed to provide on-site information for healthcare professionals who use the INRatio System to test PT in the management of patients on warfarin.

Using 3-D simulation technology, E-Trainer creates a virtual learning environment that enhances comprehension and retention, while providing a standardized program to improve and maintain operator competency. This self-paced, interactive training tool allows users to learn and review the materials any time it's convenient.

Divided into four brief and clearly defined modules, each section concludes with an assessment tool to gauge comprehension and retention of the materials.

### Product Description

The first module of the program includes a discussion of how the test is performed along with a description of the monitor. It also includes details about the test strip and a review of the integral quality control checks.

### Main Menu

This section details how to personalize and manage the set-up menu, including instructions for selecting the units in which test results will be displayed. The practice may also define its own "target" therapeutic range using the menu commands.

### Performing the Test

This section includes a virtual demonstration of the test procedure: preparing for the test, inserting the test strip and checking the test strip code, proper finger stick technique and sample application.

### Trouble Shooting

The trouble shooting module reviews potential operational, environmental and procedural error codes, including the temperature of monitor or strip, proper sample size and battery condition.

Once the assessments at the end of each module have been successfully completed, a certificate of completion can be printed from the program to verify that training has been accomplished.

While the INRatio system is a CLIA-waived test that is easy to perform, proper training helps to ensure quality results. E-Trainer makes it easy, efficient and cost-effective to maintain a high level of staff readiness for helping patients manage their anti-coagulation therapy.
